Uniform Medical Plan

Prescription Drug Formulary

Effective
January 1, 2003

PLEASE NOTE: This formulary may be revised throughout the year as a result of new information and changes in drug availability. To confirm a drug's status, call 1-800-903-8224.

For more information on your Uniform Medical Plan (UMP) prescription drug coverage, see your *UMP 2003 Certificate of Coverage*, access the UMP Web site at www.ump.hca.wa.gov, or call 1-800-903-8224.

USING THIS DOCUMENT

The Uniform Medical Plan (UMP) provides access to quality health care at an affordable price. This formulary offers a wide range of medications to choose from and is reviewed regularly by an independent group of practicing physicians and pharmacists to help ensure that the content is medically sound and supportive of your health. Your provider may be able to help you save money by prescribing medications that are in Tier 1 or Tier 2.

UMP ENROLLEE COST-SHARING REQUIREMENTS FOR FORMULARY AND NONFORMULARY DRUGS

As part of the UMP benefit, all prescription drugs are subject to an annual deductible whether purchased by mail-order or at a retail pharmacy. After the deductible has been satisfied, your cost for a prescription will vary according to a number of factors, including whether the drug is a generic drug; a formulary single-source brand name drug; or a single-source nonformulary or multi-source brand name drug. A different tier-level enrollee cost-share applies to each of these categories, and a description for each is illustrated in the table below. Also, certain exclusions, limitations, and prior authorization requirements may apply to some medications as outlined in the *UMP 2003 Certificate of Coverage*. UMP retains the right to assign medications to their respective tiers, or to shift medications to a different tier during the year as information and drug availability changes.

Cost Share Tier	Description (up to a 90-day supply)	Your Cost at a Retail Pharmacy	Your Cost at Mail Order ¹
1	Generic ² drugs, all insulin, and all disposable diabetic supplies	20% ³	\$10
2	Single-source ⁴ <i>formulary</i> brand name drugs	30% ³	\$40
3	All multisource ⁵ and <i>nonformulary</i> single source drugs	50%	\$80

1 Your cost for a mail-order prescription is the copay for that tier or the cost of the drug, whichever is less.

2 Generic drugs have the same active ingredient(s) as brand name drugs no longer under patent and are usually less expensive. They are typically sold under an alternate brand name or the generic (chemical) name for that drug.

3 A cost-share limit based on the number of days' supply purchased applies to **Tier 1** and **Tier 2** drugs that are purchased from a **UMP network retail pharmacy**. Please refer to your *UMP Certificate of Coverage* for details.

4 Single-source brand name drugs are proprietary drugs that are still under patent by the manufacturer. There are no generic equivalents available. As the patent expires on single-source brand name drugs and generic alternatives become available, the coverage tiers for the brand name drug may change without notice.

5 Multi-source brand name drugs are proprietary drugs no longer under patent. Generic equivalents are available.

HOW TO CHECK WHETHER YOUR MEDICATION IS ON THE UMP FORMULARY

To assist you in locating your medication, the formulary is divided into therapeutic chapters. Within each chapter is a separate section for the different categories of drugs that fall into that chapter. Drug names are listed to the left with the corresponding cost share tier on the right. Each section also contains a list of commonly prescribed nonformulary products along with their possible formulary alternatives.

Generic products (in italics) are listed first in each section. Their corresponding brand names shown in parenthesis and identified with an asterisk (*) are listed as a reference only and are covered in the third cost share tier.

Brand name products are listed next. Their corresponding generic names (in italics) are shown for reference only and are not meant to indicate that a generic product is available (the brand name drug may still be under patent). All brand name formulary drugs are listed in this document. If your brand name medication is not listed, it is a nonformulary product.

EryPed Tablet, Chewable 200mg		<i>Erythromycin Ethylsuccinate (Various)</i>
PCE		<i>Erythromycin Base (Various)</i>
		<i>Erythromycin Ethylsuccinate (Various)</i>

Pregnancy Category X warning - the risk to the baby outweighs the benefit of the medication.

The recommended dose for people over 65 years is often lower than the manufacturer's usual dosing guidelines.

Use by people 65 and older is generally not recommended. The side effects may not be obvious but may be serious. Safer medications may be available. If used, lower dosages are recommended.

Actonel (Risedronate Sodium)		Tier 2

* Indicates brand-name drug covered in Tier 3

Tier 1 Generic drugs, all insulins, and disposable diabetic supplies.

Tier 2 Formulary single-source brand name drugs.

Tier 3 Single-source nonformulary brand name drugs, and all multi-source brand name drugs.

NC Drug not covered.

 Pregnancy Category X warning - the risk to the baby outweighs the benefit of the medication.

 The recommended dose for people over 65 years is often lower than the manufacturer's usual dosing guidelines.

 Use by people 65 and older is generally not recommended. The side effects may not be obvious but may be serious. Safer medications may be available. If used, lower dosages are recommended.

* Indicates brand-name drug covered in Tier 3

Tier 1 Generic drugs, all insulins, and disposable diabetic supplies.

Tier 2 Formulary single-source brand name drugs.

Tier 3 Single-source nonformulary brand name drugs, and all multi-source brand name drugs.

NC Drug not covered.

 Pregnancy Category X warning - the risk to the baby outweighs the benefit of the medication.

 The recommended dose for people over 65 years is often lower than the manufacturer's usual dosing guidelines.

 Use by people 65 and older is generally not recommended. The side effects may not be obvious but may be serious. Safer medications may be available. If used, lower dosages are recommended.
